SUMMARY

Java Backend Developer with expertise in engineering scalable, fault-tolerant distributed systems using **Spring Boot**, **Kafka**, and **Microservices**. Experienced in the full software lifecycle (SDLC), from architecting secure **REST APIs** with **Spring Security** to implementing production-grade observability with the **ELK Stack**. Proficient in bridging development and operations via **CI/CD pipelines**, **Docker**, and database optimization (**MongoDB**, **Redis**) to deliver robust, high-performance solutions.

EDUCATION

International Institute of Professional Studies (IIPS) DAVV, Indore <i>Integrated Master of Computer Applications (BCA+MCA) CGPA: 8.29</i>	2022 - Present Indore, MP
--	------------------------------

SKILLS

Programming Languages: Java, SQL, C, C++
Frameworks: Spring Boot, Spring Security, Thymeleaf, Microservices, Bootstrap
Tools: Git/GitHub, Kafka, Jenkins, GitHub Actions, Docker, Resilience4j, Postman, Elasticsearch, Kibana
Databases: MongoDB, MySQL, Redis
Concepts: REST APIs, OOP, Data Structures & Algorithms, System Design, Distributed Tracing, CI/CD

EXPERIENCE

Lead Backend Developer (Academic Role) IIPS DAVV Job for Real (Job Portal) Spring Boot, MongoDB, Spring Security, Swagger • Architected and engineered backend infrastructure using Spring Boot and MongoDB, integrating Spring Security with JWT-based authentication for secure, scalable access control. • Implemented and streamlined role-based access workflows for Job Seekers, Employers, and Admins, enhancing user onboarding efficiency by 40%. • Optimized and fine-tuned database queries and REST API endpoints, reducing response times by ~30% under simulated load of 100+ concurrent users. • Documented, validated, and stress-tested REST APIs with Swagger and Postman, achieving 95%+ functional coverage and ensuring production-ready quality.	Jan 2025 - May 2025 Indore, MP
--	-----------------------------------

ACADEMIC PROJECTS

DOCORE (Distributed Observability Platform) | Spring Boot, Kafka, Elasticsearch, Docker, Github Actions

- Engineered a **Dockerized, high-throughput log aggregation platform** processing **500+ events per second** with **sub-200ms latency**, decoupling ingestion from storage using **Apache Kafka** to ensure zero data loss.
- Implemented **production-grade resilience** using **Resilience4j** and a **Dead Letter Queue (DLQ)**, achieving **99.9% system availability** by automatically isolating “poison pill” messages via DLQ to prevent consumer crashes.
- Achieved **end-to-end observability** by integrating **Zipkin** Distributed Tracing and **Kibana** dashboard, reducing **debugging time by ~40%**, and automated the release lifecycle using **GitHub Actions CI/CD** pipelines.

Fit-Pilot (Microservice Fitness App) | Spring Boot Microservices, MongoDB, RabbitMQ, Eureka, Keycloak, Gemini API

- Architected a **six-service microservice ecosystem** (User, Activity, AI, Gateway, Config Server, Eureka) enabling modular, independently deployable fitness tracking components.
- Implemented **asynchronous communication** with **RabbitMQ** and Enforced **Zero Trust security** by implementing centralized Identity Management via **Keycloak**, improving **inter-service reliability and security by ~35%**.
- **Developed an AI-powered insight module** using **Gemini API** to generate personalized workout feedback, adding intelligent automation to the fitness tracking.

ACHIEVEMENTS

Cloud Computing Fundamentals – IBM SkillBuild
Career Essentials in Generative AI – Microsoft and LinkedIn
